
One dot per seed (9.56M ALiBiGPT, T1 expert iteration, Lean judge). Bar: 14 of 106 strict σ-covered held-out theorems, the full bases' median before RL. Grey ticks: medians. Only the contrast with the knockout is resolved (3 / 3 vs 0 / 6, p = 0.0033); 1 % vs 0.1 % is descriptive at 3 seeds and one σ draw per dose (p = 0.10). Replay carries σ at each arm's own rate, so the dose arms' recovery is not RL alone.
