(a) decoder-norm balance
null (R 7.6e-5)
L3 end (R 0.29)
L3 end + 6 planted
live latents
Δnorm (0 = RL-only, 1 = base-only)
(b) every RL latent has a base twin
decoder cosine (base, RL)
L3 end latents
planted features
Δnorm
(c) rotation grows with R
L2 / L3 chain
low-RL, 16 prompts/step
1 − energy-weighted decoder cos
RL / Stage-1 FLOPs (R)
